If you want to project earnings, enter a rate and hours for future pay periods.
By projecting earnings, you can see if the award is large enough to cover the planned hours per pay period.
If the student's award is not large enough to cover the projected earnings, you must either reduce the student's hours per week or request an award increase. Cells will turn red if total earnings have exhausted 75% of the student's award or if they have worked over 29 hours.
Many of the cells are protected so that the formula can't be changed. For example, the earnings cells are calculated by multiplying (rate) x (hours).
